

install composer on MAC:

run these commands from your command line:

```
php composer-setup.php
```

```
php -r "unlink('composer-setup.php');"
```

```
php -r "copy('https://getcomposer.org/installer', 'composer-setup.php');"
```

```
mv composer.phar /usr/local/bin/composer
```

which does the following:

Download the installer to the current directory

Runs the installer

Removes the installer

Moves the composer.phar file & renames it

so you can simply call "composer" from any directory
